

TitanTrax Shield™

PROJECT:

Chattanooga Christian High School
Track surface installed summer, 2003

SEVEN YEARS IN TESTING	PROVEN PERFORMANCE
In the summer of 2002 overlay products for running track installations were installed as test areas on all the high use runway areas (pole vault, broad jump).	
The runways were worn and cracked. With minimal prep work they were covered and a new latex track surface applied on top.	
Over six years of hard use and no reflective cracking!	

A FIVE YEAR WARRANTY!	FOR LONGER LASTING TRACK FINISHES
Choose the dimensionally and thermally stable "TitanTrax Shield" to:	
• Save cost of removal & replacement of asphalt	
• Receive urethane & latex/rubber track surfaces	
• Protect resurfaced tracks from cracking	
• Maintain existing drainage when resurfacing	
• Re-construct within existing curb & layout	

EZY AS 1,2,3 - PREPARE THE DAMAGED EXISTING ASPHALT	BEFORE THE INSTALLATION OF TITANTRAX
1. On existing tracks remove old surface.	
2. Repair cracks and damaged areas, fill low areas.	
3. Install the "Shield" and apply new track surface.	

Shield your track with TitanTrax!!!
