ENGINEERED FOR SPORT

PRO[®] AUSSIECLAY

CLAY PLAY ENGINEERED.

Sliding is possible, the bounce is high and the speed is slow. Pro AussieClay[®] is engineered to perform better in all conditions, and go farther than other applications.

Pro AussieClay[®] is created to provide the sport of tennis with a high performance, cost effective, low maintenance synthetic court surface with play similar to a clay court. Many climates have severe water restrictions and are extremely hard on clay. At times the maintenance budgets of many clubs just can't keep up with clay's heavy demands. Pro AussieClay[®] easily converts an all-weather existing court to a clay court. This surface is similar to a clay court on which sliding is possible, the bounce is high and the play is slow. Pro AussieClay[®] is ideal for a club owner, as the level of performance is high and the maintenance is low.

Pro AussieClay[®] is engineered to resurface old hard courts, rebuild old clay courts, and new construction on a crushed rock base. It has a half inch depth of comfortable synthetic fibers with natural "Rubico Green" or "French Red" in-fill. It us a waterless clay like surface that needs only a light grooming between play. Pro AussieClay[®] is the perfect playing surface for the indoor or outdoor court where maintenance costs are an issue.

**Low maintenance • Waterless • Quick & easy installation • Installs over any base
"Green" construction • Excellent foot release • Painless comfortable play**

X-Section

- ① Crushed Rock, Concrete or Asphalt Base
