NGI[®]

ENGINEERED FOR SPORT

PRO[®] COURT

STRONGER. BETTER. WORKS HARDER. GOES FARTHER.

ProCourt[®] is a top-line court ideal for all levels of competitive tennis at a medium speed of play.

This technology is not only the best cushion court in quality, but it is also best in play!

ProCourt[®] is a part of NGI's grass surfacing system, which provides all of the benefits of a natural grass tennis court without a rigorous maintenance schedule. The artificial tufts are constructed of premium polyethylene fibers interwoven into a dimensionally and thermally stable backing with a urethane coating. Our one-of-a-kind Sportline System[®] for integrated court lines allows for minimal stress on seams. The compilation of these components provides the end user with a long term, quality tennis playing surface. ProCourt[®] is the best combination of stronger turf and quality infill.

ProCourt[®] provides proven user-friendly qualities such as optimum turn, slide, and foot release characteristics as well as traction properties.

Preferred Playability • Bio-Mechanically Superior • Low Maintenance • Quality Infill
