ENGINEERED FOR SPORT

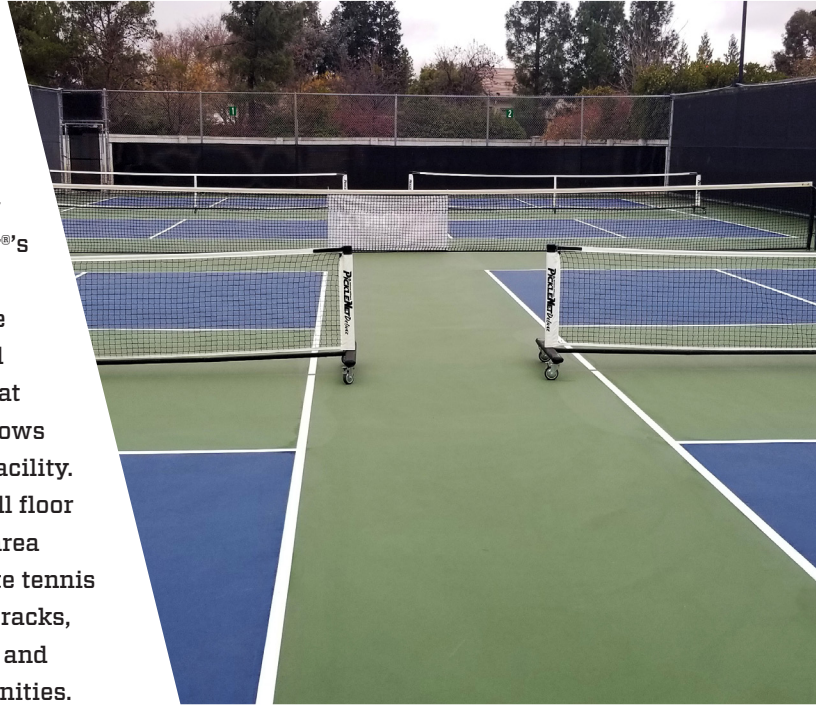

TITANTRAX[®]

AIR

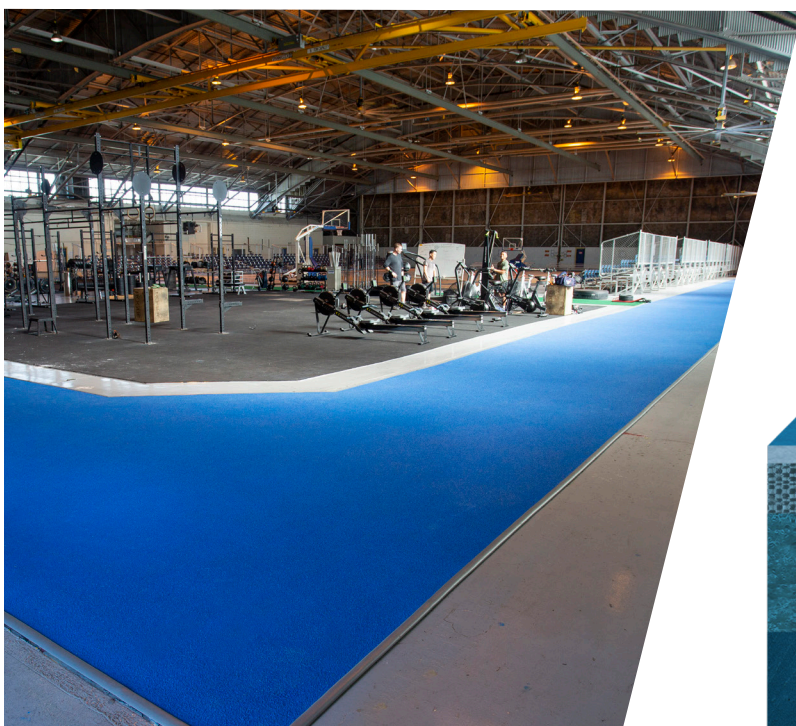

STRONGER. BETTER. WORKS HARDER. GOES FASTER.

TitanTrax Air[®] delivers a multi-sport application for a variety of indoor and outdoor venues.

A crucial piece of TitanTrax Air[®]'s design is the platform cushioning. AIR provides unparalleled rebound and force reduction for the athlete providing top levels of performance and comfort. TitanTrax Air[®]'s optional surface finishes allow the owner to choose what perfectly suits their facility requirements. Some of these finishes include poured urethane, granulated rubber topped urethane or flexible acrylic finishes that guarantee uncompromising performance. Air also allows the ability to use different finishes within the same facility. This makes transitioning from a basketball/volleyball floor area to a surrounding running track or weight room area simple. We offer applications for post tension concrete tennis courts, rooftop sports areas, indoor/outdoor running tracks, and multi-use gyms for volleyball, tennis, basketball and badminton. There are endless customization opportunities.

Multi-Sport applications • Easy Installation • Urethane & acrylic surface finishes • Exclusive warranty
Bio-mechanically Superior • Indoors/Outdoors/Rooftops

X-Section
