ENGINEERED FOR SPORT

TITANTRAX[®]

PK

QUICKER. STRONGER. BETTER.

TitanTrax PK[®] is the surface you're looking for in pickleball with the best play in all climates & temperatures.

The fast-paced game of pickleball is growing in popularity and requires a quick responding playing surface like TitanTrax PK[®].

NGI Sports' patent pending TitanTrax PK[®] playing surface is the only pickleball surface system designed specifically for the sport of pickleball. The TitanTrax PK[®] surface provides the perfect ball response and surface action for all players. Many athletic playing surfaces are designed to be shock absorbent and cushioned for an inflated ball such as a basketball, while the TitanTrax PK[®] system delivers the ball bounce and consistency of play specifically for a 40 hole tested and tournament approved plastic pickleball.

TitanTrax PK[®] is an Overlay Renovation Technology (ORT) surface that can be installed over existing asphalt or concrete courts or it can be installed as new construction. It is preferred for conversion of existing basketball and tennis courts to pickleball, and is used for all weather play. TitanTrax PK[®] meets USAPA and International Federation of Pickleball (IFP) requirements for surface performance.

**Excellent surface response to all aspects of play • Indoor, outdoor & rooftop applications • Fast drying
Installed over concrete or asphalt • Low maintenance • Quick & Easy Installation • Playable in all temperatures**

X-Section

- ① Repaired Asphalt/Concrete
- ② TitanTrax Shield
- ③ TitanTrax Grid with Cement Mix
- ④ Color Finish
- ⑤ Game Lines
