ENGINEERED FOR SPORT

TITANTRAX®

FOR RUNNING TRACKS

STRONGER. BETTER. WORKS HARDER. GOES FASTER.

TitanTrax® delivers the best repair applications for both indoor and outdoor running tracks and field venues.

TitanTrax® is designed to repair asphalt damage of small areas like the center paving joint or large sections of alligator cracking on track pavement. TitanTrax® materials are intended to protect the track surfaces from moisture that may rise or migrate from the underlying base while also protecting the underlying pavement base from water intrusion on vented track systems. TitanTrax® aids in the prevention of reflective cracks to the finished track running surface.

- Applications of the 24" wide TitanTrax® CPR are intended for cracks such as split paving joints.
- Applications of TitanTrax® Shield are intended for larger areas of repair on sections of the track like alligatored cracking.
- Applications of TitanTrax® Air are intended for resurfacing the entire track.

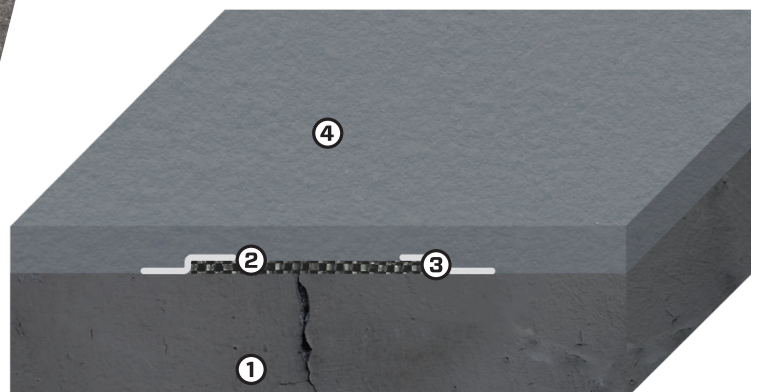

TitanTrax® Running Track applications allow for optional surface finishes to suit facility requirements. This includes poured urethane, paved urethane, granulated rubber, urethane structural spray, and rubber & latex.

TITANTRAX CPR

X-Section

- | | |
|----------------------------|-------------------------|
| ① Structural Crack in Base | ③ TitanTrax Seal Tape |
| ② TitanTrax Shield | ④ Running Track Surface |

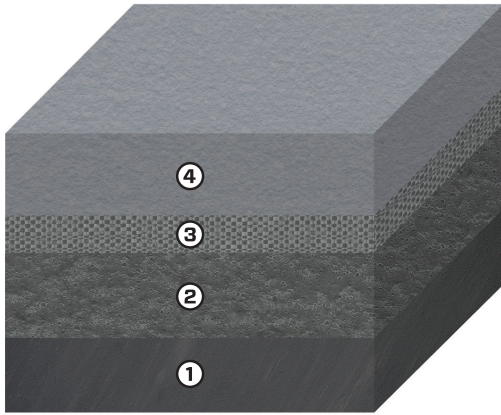

TITANTRAX

FOR RUNNING TRACKS

STRONGER. BETTER. WORKS HARDER. GOES FASTER.

TITANTRAX[®] AIR X-Section

- ① Post Tension Concrete / Asphalt Base
- ② Attached Urethane Cushion
- ③ Spike Proof Layer
- ④ Wear Surface

TITANTRAX[®] SHIELD

X-Section

- ① Repaired Asphalt/Concrete
- ② TitanTrax Shield
- ③ Urethane or Latex Wearing Track Surface
